FAMILY-BASED PROGRAMS FOR PREVENTING AND REDUCING JUVENILE CRIME

This fact sheet presents family-based programs for preventing and reducing juvenile crime whose effectiveness has been well established by reliable and rigorous evaluation studies.

The criteria used to determine the effectiveness of programs include the following:

- a rigorous evaluation methodology;
- a conceptual framework based on scientific knowledge;
- measurable and concrete results on the reduction of the negative effects of risk factors or the increase of the positive effects of protective factors;
- effects that are maintained over time;
- the replication of the program in different environments, obtaining similar results each time.

PROGRAMS AND INTERVENTION STRATEGIES FOR FAMILIES

For programs involving the family, three intervention strategies are considered adequate:

- parental training programs;
- family therapy programs;
- integrated approach programs.

The choice of programs presented here is based on the following criteria: the programs must be based on the family and must target the risk factors associated with families; youth targeted by the programs must be identified as youth who are at risk of developing delinquent behaviour or who are already involved in delinquent activities; and the program results must be supported by evaluations that confirm a reduction in the risk of juvenile delinquency, the mitigation of risk factors or the reinforcement of protective factors.

Parental training programs

This type of program essentially aims to teach parents how to use adequate discipline techniques, balanced supervision and control, and how to set clear and consistent limits for children and youth who tend to disobey rules.

Parental training uses a structured approach, mainly designed to improve family relations and to help parents use appropriate child-rearing techniques.

| **Preventive Treatment Program**          | **Age group:** 7-9 years (boys only)              | **Problems:**  
  • gang-related activities;  
  • delinquency;  
  • substance abuse;  
  • aggression and violence.  
**Risk factors:**  
  • mismanagement of family conflicts;  
  • poor parental supervision;  
  • use of corporal punishment;  
  • inconsistent discipline.  | **Results:**  
  • at 12 years old, the boys who participated in this program commit fewer thefts, are less likely to have substance abuse problems and are less involved in fights; and  
  • at 15 years old, the boys who participated in this program are less involved with gangs, have fewer substance abuse problems, commit fewer delinquent acts and have fewer friends who had been arrested by the police.4,5  
**Rating³:**  
I: exemplary  
II: ns (not stated) |
| **Parenting with Love and Limits (PLL)**  | **Age group:** 10-18 years (girls and boys)        | **Problems:**  
  • gang-related activities;  
  • delinquency;  
  • substance abuse;  
  • aggression and violence;  
  • academic problems.  
**Risk factors:**  
  • poor parental supervision;  
  • mismanagement of family conflicts;  
  • poor family bonds;  
  • family violence;  
  • sibling with behaviour problems;  
  • use of corporal punishment;  
  • inconsistent discipline.  | **Results:**  
  • in the year following PLL, 85% of youth did not have a substance abuse relapse;  
  • compared to a control group, PLL youth reduced their aggressive behaviour, depression and attention deficit problems; and  
  • parents of PLL, compared to those of a comparison group, improved communication with their youth.6  
**Rating:**  
I: exemplary  
II: ns |

**Family therapy programs**

Family therapy adopts a multidimensional approach that combines parental training, youth training and family dynamic improvement. Family therapy programs essentially aim to improve communication and interaction between parents and children and enrich parental practices to better resolve problems that arise.⁸

### Multidimensional Treatment Foster Care (MTFC)

**Age group:** 11-18 years (girls and boys)
Youth with chronic delinquent behaviour who are at risk of incarceration.

**Problems:**
- delinquency;
- aggression and violence.

**Risk factors:**
- poor parental supervision;
- mismanagement of family conflicts;
- parents who are involved in criminal activity or who have a criminal history.

**Results:**
- after a 12-month follow-up, MTFC youth, compared to youth placed in traditional placement centres, committed fewer offences (an average of 2.6 offences versus 5.4);9
- after a 12-month follow-up, MTFC boys aged 12 to 17 spent 60% fewer days in prison compared to boys placed in traditional placement centres, used fewer hard drugs, had a lower rate of recidivism and were more likely to return to their families;5
- after a 24-month follow-up, MTFC youth had better academic integration.10

**Rating:**
- I: exemplary
- II: exemplary

---

### Brief Strategic Family Therapy (BSFT)

**Age group:** 8-18 years (girls and boys)
Youth who present or who are at risk of adopting delinquent behaviour.

The therapy also addresses dropouts and youth with substance abuse problems.

**Problems:**
- delinquency;
- substance abuse.

**Risk factors:**
- poor parental supervision;
- mismanagement of family conflicts;
- poor family bonds;
- siblings with behaviour problems.

**Results:**
BSFT is considered an effective treatment to improve behaviour problems, reduce recidivism among young offenders and improve family relations.7

**Rating:**
- I: effective
- II: exemplary

Positive- Parenting- Program (Triple P) Also accompanies parental training
Integrated approach programs

The integrated approach involves the participation of several partners (health and social services, education, justice, police, mental health professionals, substance abuse treatment, etc.). Integrated approach programs primarily aim to break family isolation by combining, in a personalized way, a wide range of services and support networks for the family and youth. This approach also takes into consideration the fact that the risk factors come from several areas (neighbourhood, school, friends, family and the youth's individual characteristics).

| SNAP ™ Under 12 Outreach Project (ORP) | Age group: 6-12 years [boys only] Boys who have committed offences or who present serious behaviour problems. **Note:** a program for girls, *SNAP ™ Girls Connection*, was established in 1996. | Problems: • delinquency; • aggression and violence. Risk factors: • poor parental behaviour • poor parental supervision. | Results: Compared to a control group, SNAP participants:
- had fewer individual problems (anxiety, depression);
- improved their social skills (better relations with peers; participation in activities);
- reduced their rate of aggression and delinquency;
- 60% of high risk children who participated in ORP did not have a criminal record;
- showed positive skills after treatment, developed positive ties with teachers, friends and family members and were less likely to associate with "bad friends"; and
- parents had less difficulty in relations with their children and were confident that they could adequately supervise their behaviour. |

CONCLUSION

Whether they are based on parental training, family therapy or an integrated approach, the programs presented in this fact sheet prove that effective intervention with families can effectively reduce the risk of juvenile delinquency. The following are a few key elements to the success of these programs:

- Target the main risk factors. Several researchers have demonstrated that the most effective prevention programs target population presenting several risk factors at once.¹⁷

- Strengthen the protective factors associated with families, particularly parent-child relations, communication, parental supervision, discipline and family ties.

- Implement programs that combine diversified intervention strategies and use an integrated approach. The more complete a program is and the more it involves several services, the better the chances of success.¹⁸
References

Notes

1. Increasingly, the cost benefits analysis is also taken into consideration as a criterion for program effectiveness. This analysis shows that the money invested in prevention programs is profitable when compared with the resulting benefits (Welsh, 2007).

3. Explanation of program rating levels:
   I. Office of Juvenile Justice and Delinquency Prevention (OJJDP) - Model Programs Guide (MPG)
      • Exemplary: program with a high degree of fidelity that demonstrates robust empirical findings, a reputable conceptual framework and an evaluation design of the highest quality (experimental).
      • Effective: a program with sufficient fidelity that demonstrates adequate empirical findings, uses a sound conceptual framework and an evaluation design of high quality (quasi-experimental).
      • Promising: program that demonstrates promising empirical findings, uses a reasonable conceptual framework but requires more thorough evaluation; the evaluation is based only on pre- and post-test measurements.
   II. Strengthening America’s Families Project
      • Exemplary: program that has an evaluation of the highest quality, presents positive results and has been replicated several times.
      • Model: program that has been thoroughly evaluated but seldom replicated.
      • Promising: program that requires other research or uses non-experimental evaluation methods; results seem promising but need to be confirmed with more rigorous evaluation methods.
